CARBON REDUCTION PLAN – FY26

Logicalis International Ltd

Commitment to achieving Net Zero

Logicalis International Ltd is committed to achieving net zero emissions by 2050.

Baseline emissions footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions.

Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline year: 2022	
Additional details relating to the baseline emissions calculations:	
Scope 2 = Market-based detailed in emissions table below.	
Baseline year emissions:	
Emissions	Total (tCO2e)
Scope 1	1,166
Scope 2	3,105
Scope 3 (included sources)	207,258
Total emissions	211,529

Current emissions reporting

Reporting year: 2026	
Emissions	Total (tCO2e)
Scope 1	741
Scope 2	2,094
Scope 3 (included sources)	136,964
Total emissions	139,799

Emissions reduction targets

In order to continue our progress to achieving net zero, we have adopted the following carbon reduction milestone targets, validated by the Science Based Targets Initiative (SBTi):

- Reduce scope 1 and 2 emissions by 50% by 2030 from our 2022 baseline
- Ensure 85% of suppliers set science-based emission reduction targets by 2028

Carbon reduction projects

Completed carbon reduction initiatives

Logicalis has implemented a range of carbon reduction initiatives across its global operations, including increased renewable electricity sourcing, energy-efficiency improvements, office footprint optimisation, sustainable travel measures and operational energy controls. During FY26, specific measures included renewable electricity sourcing for two US data centres, cold-aisle containment and advanced power monitoring at the Guernsey data centre, LED lighting upgrades across APAC locations, energy-saving measures in Indonesia, HVAC optimisation in South Africa and relocation of the Cyberjaya office to a smaller green building.

Logicalis has demonstrated measurable progress at organisational level. Reported total Scope 1, 2 and 3 emissions on a market-based basis reduced from **211,529 tCO_2e in the FY22 baseline year to 139,799 tCO_2e in FY26**, representing an absolute reduction of **34%**.

We have also achieved a **34% reduction in market-based Scope 1 and 2 emissions against the FY22 baseline**, alongside an increase in renewable electricity use from **1%** in FY22 to **42%** in FY26.

Logicalis monitors its carbon performance at organisational level and reports progress against its science-based emissions reduction targets. Logicalis reports achieved emissions reductions at organisational level rather than assigning reductions to individual projects where a direct causal calculation has not been established.

Future carbon reduction initiatives

In the future we plan to implement further measures such as:

- Direct engagement with suppliers responsible for 85% of Logicalis's revenue by spend to ensure they have SBTs in place by 2028.
- Collect product carbon data from suppliers to improve Scope 3 emissions data accuracy.

Declaration and sign off

This Carbon Reduction Plan has been completed in accordance with PPN 006 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard[13] and uses the appropriate government emission conversion factors for greenhouse gas company reporting.[14]

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements (where required), and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.[15]

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of Logicalis International Ltd:

Nick Zinzan
Head of Responsible Business
